Understanding the Water Wastewater Processes in Industrial Settings

Funded by Horizon Europe under a Processes4Planet call, the CORNERSTONE project (Horizon Europe Grant Agreement No. 101138504) is conducting an industrial current-state assessment survey to understand the awareness and activity levels in regard to the usage of circular water technologies in industrial settings.

The survey has been created by the project's partner, 20FIFTY Partners, and is designed to gather valuable insights and aid the development of a *Decision Support Toolkit* to streamline the adoption of water, energy and solute recovery solutions in the industry.

Your answers will be instrumental in helping the project identify the trends, drivers, barriers and enablers of circularity adoption across water/wastewater processes in industrial settings.

The survey will take approximately 10-15 minutes depending on your answers, and all responses

given will be treated in the strictest confidence. Responses will only be viewed in aggregate in the form of a statistical report.

Further survey objectives:

- Assess awareness of circularity and resource recovery in water and wastewater processes across the industry;
- Assess circularity and resource recovery implementation activity across the industry;
- Analyse barriers and enablers to the adoption of circularity and resource recovery technologies and approaches in water and wastewater processes across the industry.

Learn more and complete the survey [HERE](#).
