A WEBINAR by the Processes4Planet project - AMIGDALA

About the AMIGDALA project:

The **AMIGDALA project** - Designing a digital twin to model the European process industry transformation to meet Green Deal objectives - is a Horizon Europe (funded under a Processes4Planet call) research and innovation project receiving €7 million in funding. Led by a European consortium, it aims to guide the transformation of the European industry towards sustainability, profitability, and resilience, aligning with the goals of the European Green Deal. By integrating various models of economy, trade, energy consumption, and land use, the project provides foresight into decision-making processes, aiding both governments and industries. AMIGDALA seeks to inform European legislators and industries about the interplay between regulatory actions and global industrial investments, fostering sustainability while considering strategic positioning, global competitiveness, and resilience.

About the webinar:

This webinar will focus on how the AMIGDALA project aims to address challenges faced by industries and policymakers in achieving the objectives of the European Green Deal. Speakers include Professor **Dr-Ing Sebastian Engell from A.SPIRE**, who will discuss challenges in the European process industry and expected outcomes from AMIGDALA. Ms **Florie Gonsolin from CEFIC** will share insights from their sector and how AMIGDALA can contribute. Several consortium partners will present the project's objectives, approach, and milestones and invite participants to shape and define the project to meet decision-making needs and foster dialogue across industry, policymakers, and academia.

The webinar will take place **online** on the **9th of April 2024**, from **11:00 – 12:00 (CET)**.

Register **here** to learn more about the process industries in the context of the European Green Deal.
