Seven projects funded under SPIRE cPPP have been selected in the latest **CORDIS Results Pack!** The focus is on clean technologies developed to innovate and promote methods and solutions to improve energy efficiency through practises of re-using waste heat from process industry. **TASIO, SUSPIRE, VULKANO, I-Therm, Industr3s, DREAM and Smartrec** are highlighted in this Result Pack as cutting-edge EU projects **reducing the impact of energy intensive industrial processes** and untapping industrial waste heat recovery and valorisation potential.

On a larger perspective, these projects, promoting heat recovery and storage, heat upgrading and heat to power conversion in different sectors, are helping Europe to transform into a sustainable, competitive economy, while addressing **environmental and climate-related challenges**.

Read more about this selection [here](#).
