LEADS

Full Title: LEADS: Creating and Managing a Pipeline of H2020 Projects for the Innovation Fund on CCUS

Aim:

LEADS aims to accelerate the path towards the EU's target of becoming the first carbon-neutral continent by 2050. The challenge is tackled by building an innovation pipeline for promising Carbon Capture Use and Storage technologies from Horizon 2020 / Horizon Europe to the Innovation Fund, supporting innovation owners in overcoming the main bottlenecks and reaching final investment decisions. LEADS will, therefore, bridge the gap from research to deployment for CCUS projects in Europe. Contact the project team if you have a CCUS technological innovation you would like to see moving to deployment.

Concept:

Therefore, the project will bridge the gap from research to deployment for CCUS projects in Europe by building an innovation pipeline of promising Horizon 2020/ Horizon Europe projects and supporting innovation owners in overcoming the main bottlenecks and reaching final investment decisions. Furthermore, LEADS will deliver a set of measures to assess and select the most promising framework projects, coach them, and enable them to apply to Innovation Fund. A set of reusable IF tools will be created. Synergy mechanisms between H2020/HEU and IF will also be created by aligning the CCUS up-scaling potential with IF targets.
