

SPINDEC

Synergies for Policy
alignment, INitiative
Design and
Implementation for
Industrial
DECarbonisation

Project overview

SPINDEC is a Horizon Europe Coordination and Support Action that supports Member States and Associated Countries in accelerating the decarbonisation of energy-intensive industries. Building on previous European initiatives, the project strengthens policy coordination, supports the development of national decarbonisation roadmaps, facilitates mutual learning and best-practice exchange, and promotes the uptake of low-carbon solutions across Europe.

Project objectives

Enable structured coordination among Member States and Associated Countries.

Map, compare and update industrial decarbonisation strategies.

Identify and share best practices to accelerate implementation.

Promote knowledge valorisation and strategic dissemination.

Project impact

Shared roadmaps and monitoring tools

Capacity building and Communities of Practice

Structured and sustained governance

Knowledge valorisation and dissemination

Policy-driven acceleration of Europe's industrial transition

SPINDEC brings together 28 partners from across Europe, including universities, ministries, innovation agencies, research organisations and industry associations working together to support industrial decarbonisation.
