

Monitors production quality from everywhere

Israeli based **SME**

SPIRE 02-2016: Plant-wide monitoring and control of data-intensive processes

Who are we?

- QualityLine team brings over 20 years of experience in setting up and managing more than 100 mass production lines worldwide.
- We practically faced every possible challenge related to mass production lines management.
- We "live and breathe" production lines and we fully understand what does it take to establish a line that will produce high quality products.
- We were chosen by the Israeli chief Scientific commissioner as one of the most promising future technology.

The Gap

One of the biggest concern of companies that use several manufacturing locations or when outsource their manufacturing is:

How to monitor manufacturing quality?

How do we continuously receive the entire information in a way that it is already analyzed ?

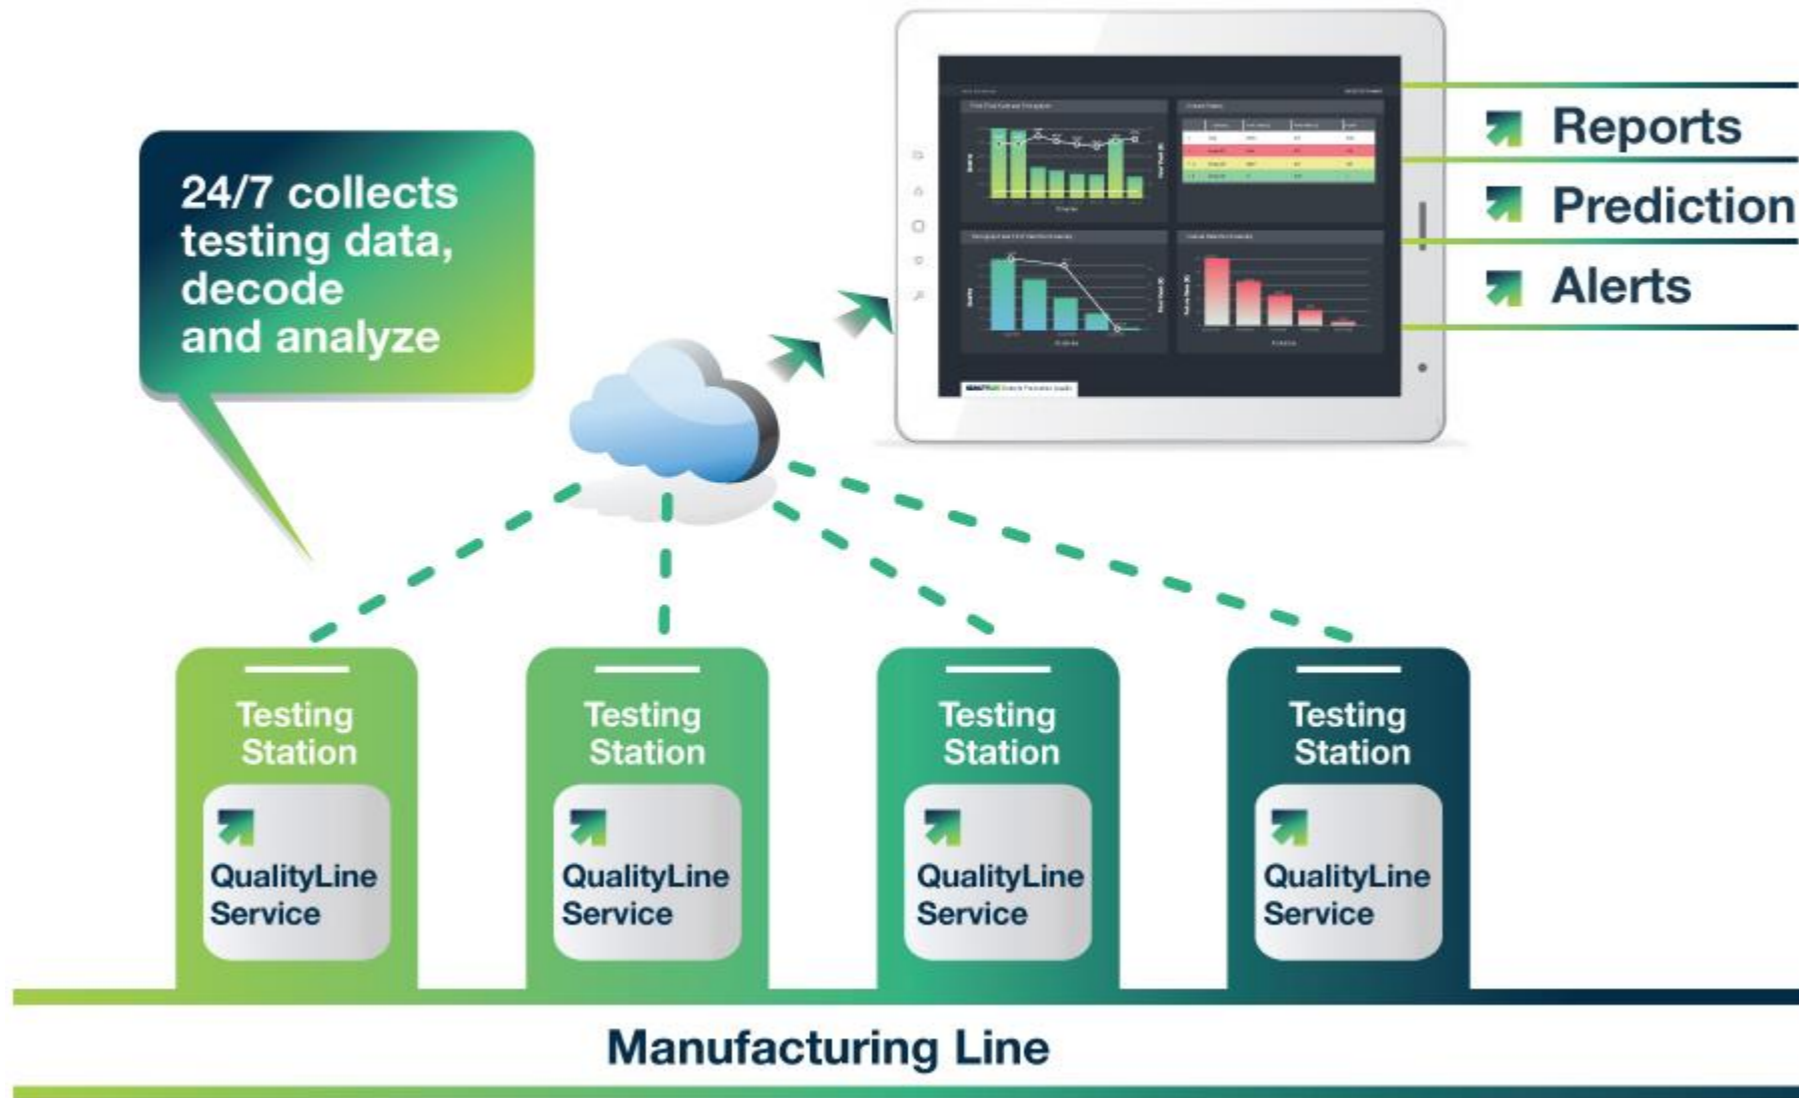

Technology

Digital integration with testing stations and machinery located on the manufacturing line (both manual and automated) :

- Testing and machinery data is been automatically collected 24/7.
- Data is automatically analyzed and shown in analytics dashboards.
- Data mining capabilities.
- Alerts.
- Reports scheduler.

The system allows 24/7 monitoring of manufacturing quality no matter if it located in a near by manufacturing location or located on the other side of the world.

System Architecture

Analytics dashboards

Partners search

1. Join an already existing consortia.
2. build up a consortia with partners.

We will be a loyal , efficient and a friendly **SME** partner for any consortia that will choose us.
